ABSTRACT

- This project focuses on automating the standard laptop procurement process using ServiceNow Flow Designer. The system streamlines the complete procurement workflow, starting from the HR requirement for bulk laptops and continuing through procurement request creation, vendor quotation collection, quotation review and negotiation, authorized approval, Purchase Order (PO) creation, and notifications.
- The workflow reduces manual follow-up and improves transparency by maintaining procurement information in a centralized ServiceNow platform. Flow Designer automatically handles repetitive activities such as task assignment, approval routing, PO creation, and notifications. Vendor selection and negotiation remain under the control of the procurement team, while the system provides the required workflow support and traceability. The proposed system helps improve process consistency, data accuracy, visibility, and overall efficiency in bulk IT procurement.

PROJECT DESCRIPTION

- The project “IT Procurement – Automating Standard Laptop Order” is developed to streamline the bulk laptop procurement process using the ServiceNow platform and Flow Designer. The process begins with HR raising a requirement for standard laptops, followed by creating a procurement request containing the required quantity, specifications, delivery date, and business justification.
- The procurement team collects quotations from multiple vendors and records the quotation details in ServiceNow. The procurement officer reviews and negotiates the quotations before making the final vendor selection. After obtaining authorized approval, Flow Designer automates the Purchase Order creation and sends notifications to HR, procurement, and the selected vendor, providing better tracking, transparency, and efficiency throughout the procurement process.
